## Priceless Headers & Kwik-Jambs

Provide More Than Just Labor Savings

### Product Application

The Priceless Header and Kwik-Jamb System is pre-engineered, cut-to-length, and ready to install. This unique assembly will help standardize the installation process while eliminating labor intensive and expensive conventional methods.

The Priceless Header and Kwik-Jamb System has been Third Party Certified by IAPMO Uniform Evaluation Services. The new report (IAPMO Report ER-0342) includes section properties, installation instructions, connection details, and allowable clip loads, all of which are certified to meet the current IBC and AISI standards. Engineers and Architects can specify the Priceless System with assurance it will pass all inspections and code regulations.

To simplify engineering, the Priceless Header and Kwik-Jamb system has gone through extensive load testing in both axial and lateral conditions. In openings where additional strength is required, the Priceless System is excellent for load bearing applications.

An additional benefit to our header system is that we offer several standard details that can be easily imported into most CAD programs, including: Strucsoft MWF (BIM), Revit, and AutoCAD. With individual section property tables and span tables included, our header and jamb system simplifies the process for architects, engineers, and contractors.

### Features and Benefits

- Flush finish eliminating build-up at the header-jamb connection
- Saves 70-80% in labor costs
- Pre-cut engineered assembly reduces waste (LEED)
- No cutting stud flanges or welding required
- Simplifies engineer design for jambs and header sizing
- Priceless Header Pro Design Software available for engineers and architects (Free download)
- Attachment clips provide easy connections to jambs
- Improved stiffness for deflection and high wind conditions
- Excellent for load bearing applications
- Meets or exceeds building code criteria
- CAD details available at SCAFCO.com

### Order Information

Priceless Headers are to be ordered to rough opening width. SCAFCO's engineering department will adjust the member length to accommodate for clip thickness and screw build-up to provide a true fit.

**LEED Credits**

MR Credit 2 - Construction Waste Management (1-2 points)

MR Credit 4 - Recycled Content (1-2 points)

MR Credit 5 - Regional Materials (1-2 points)

**Independent Product Certification**

- Code Compliance - IAPMO Uniform Evaluation Services
  - IAPMO Report ER-0342
- Structural Testing - NAHB Laboratories
- Structural Engineer - DEVCO Engineering

**Code Approvals, Performance Standards, and Product Certifications**

- AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members"
- 2012 IBC - International Building Code
- 2013 CBC - California Building Code

**American Society for Testing and Materials (ASTM)**

- A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) by the Hot-Dip Process
- A1003 - Standard Specification for Steel Sheet, Carbon, and Metallic-Coated for Cold-Formed Framing Members
- C645 - Standard Specification for Non-Structural Steel Framing Members
- C754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products
- C955 - Standard Specification for Load-Bearing (Transverse and Axial) Steel Studs, Runners (Tracks), and Bracing or Bridging for Screw Application of Gypsum Panel Products and Metal Plaster Bases
- C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories
- E72 - Standard Test Methods of Conducting Strength Tests of Panels for Building Construction

## Header Nomenclature Example

**Member Web Width**

All member widths are given in  $\frac{1}{100}$  inch.  
(Example: 6" = **600**  $\times \frac{1}{100}$  inch)

**600**      **HD/HDR**

**Style**

Nomenclature uses the following characters to designate the profile:

**HD** Header or **HDR** Header

**Flange Depth**

All flange widths are given in  $\frac{1}{100}$  inch.  
(Example:  $3\frac{1}{2}" = 3.5" = \mathbf{350} \times \frac{1}{100}$  inch)

**350** - **68**

**Mil Thickness**

*Mil Thickness is the minimum base steel thickness measured in  $\frac{1}{1000}$  inch.*  
(Example:  $0.068 = 68$  mils; 1 mil =  $\frac{1}{1000}$  inch)

## Clip Nomenclature Example

**Clip Width**

All member widths are given in  $\frac{1}{100}$  inch.  
(Example: 6" = **600**  $\times \frac{1}{100}$  inch)

**600**      **FM/SC**

**Clip Designation**

Nomenclature uses the following two characters to designate the profile:

**FM** = Flush Mount (Used with HD Header)  
**SC** = Saddle Clip (Used with HDR Header)

**Clip Height**

All clip heights are given in  $\frac{1}{100}$  inch.  
(Example:  $3\frac{1}{2}" = 3.5" = \mathbf{350} \times \frac{1}{100}$  inch)

**350** - **54**

**Mil Thickness**

*Mil Thickness is the minimum base steel thickness measured in  $\frac{1}{1000}$  inch.*  
(Example:  $0.054 = 54$  mils; 1 mil =  $\frac{1}{1000}$  inch)

## Steel Thickness Table

## Steel Thickness Table

Designation Thickness (mil)	Minimum Thickness (in)	Design Thickness (in)	Yield Strength (ksi)	Tensile Strength (ksi)	Min. Galvanized Coating
33EQS	0.0280	0.0295	57	65	G60
43EQS	0.0380	0.0400	57	65	G60
54	0.0538	0.0566	57	65	G60
68	0.0677	0.0713	57	65	G90
97	0.0966	0.1017	57	65	G90
127	0.1270	0.1337	57	65	G90

## Section Property Symbols

### Gross Properties

- $I_x$ : Moment of inertia of the cross section about the x-axis.
- $I_y$ : Moment of inertia of cross section about the y-axis.
- $R_x$ : Radius of gyration of cross section about the x-axis.
- $R_y$ : Radius of gyration of cross section about the y-axis.
- $S_x$ : Section modulus about the x-axis

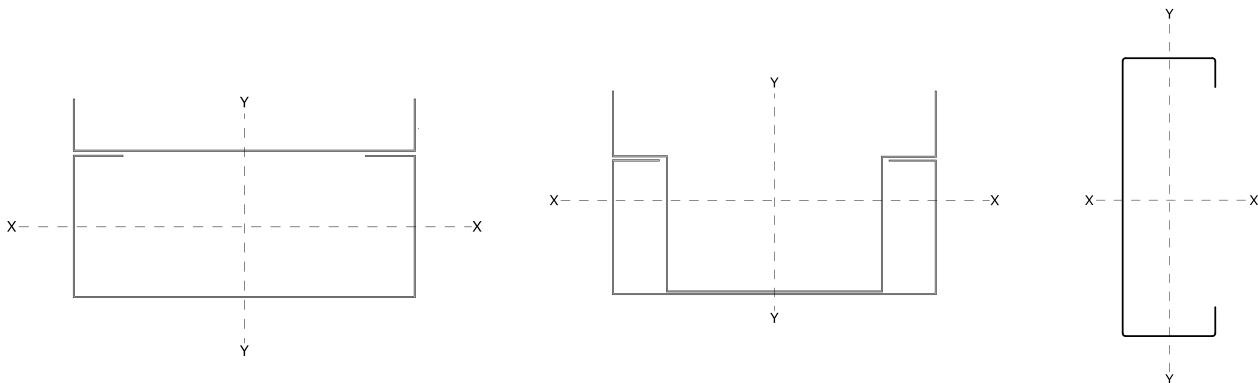

### Effective Properties\*

- $I_{xe}$ : Effective moment of inertia about the x-axis
- $I_{ye}$ : Effective moment of inertia about the y-axis
- $K_\phi$ : Critical value of rotational stiffness to eliminate distortional buckling
- $M_{ad}$ : Allowable moment based on distortional buckling, with  $K_\phi = 0$
- $M_{al}$ : Allowable moment based on local buckling
- $M_{ax}$ : Allowable moment about x-axis
- $M_{ay}$ : Allowable moment about y-axis
- $S_{xe}$ : Effective section modulus about the x-axis
- $S_{ye}$ : Effective section modulus about the y-axis
- $V_{ag}$ : Allowable strong axis shear away from punchout, calculated in accordance with AISI S100 Section C3.2.1
- $V_{anet}$ : Allowable strong axis shear at the punchout, calculated in accordance with AISI S100 Section C3.2.2
- $V_{ax}$ : Allowable shear about x-axis
- $V_{ay}$ : Allowable shear about y-axis

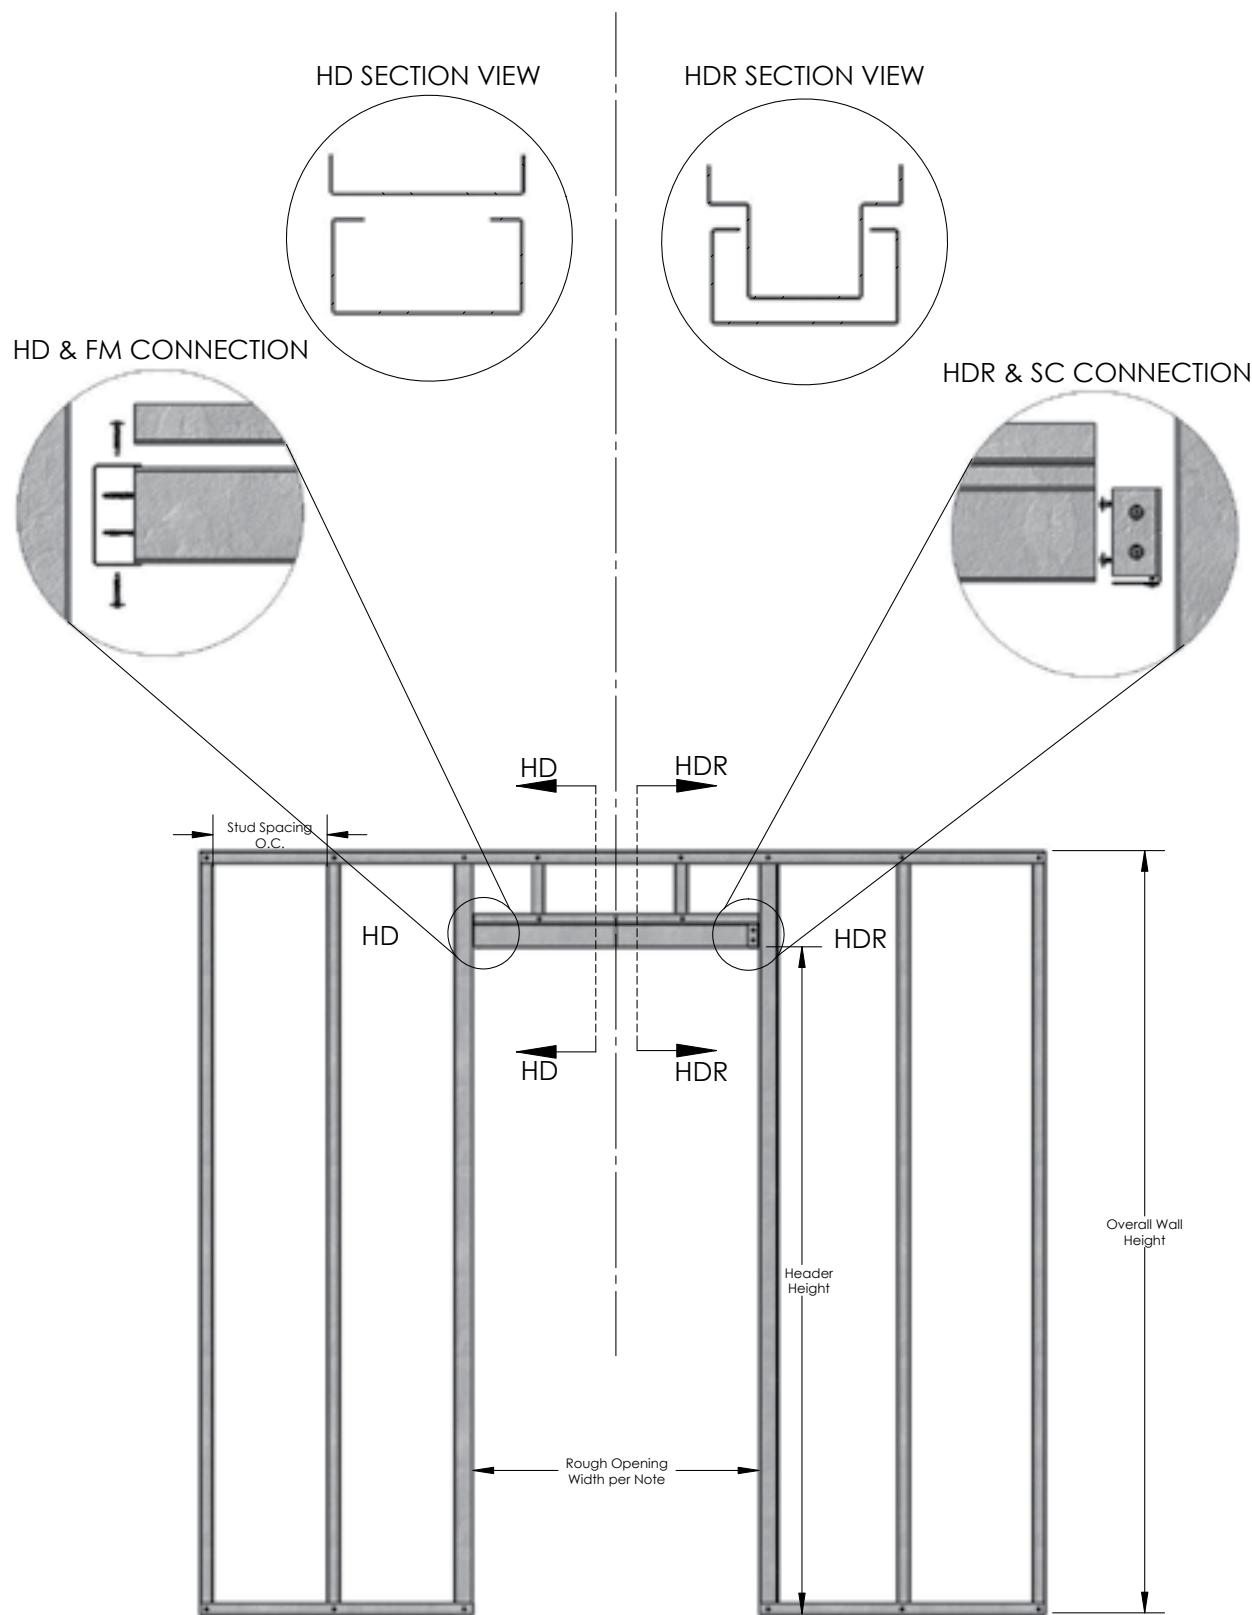

### Torsional and Other Properties

- $J$ : St. Venant torsional constant. The numbers shown in the tables for  $J$  have been multiplied by 1,000. The actual values can be obtained by dividing the listed numbers by 1,000
- $C_w$ : Torsional warping constant
- $X_o$ : Distance from the shear center to mid-plane of web
- $R_o$ : Polar radius of gyration of cross section about the shear center
- $\beta$ :  $1 - (X_o/R_o)^2$
- $L_u$ : Critical unbraced length for lateral-torsional buckling. Members are considered fully braced when unbraced length is less than  $L_u$

\*Note: Effective properties based on the "North American Specification for the Design of Cold-Formed Structural Members", 2012 edition with the 2010 supplement.

## Design Diagram Example

**Note: Priceless Headers are to be ordered to rough opening width. SCAFCO's engineering department will adjust the member length to accommodate for clip thickness and screw build-up to provide a true fit.**

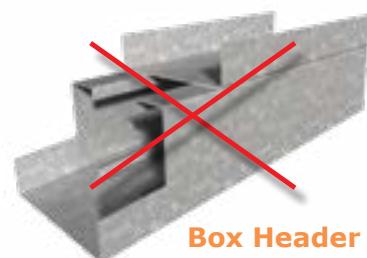

## HD Header vs. Built-Up Header Assembly

### » HD Header

SCAFCO's HD Header replaces the stud-in-track Nested Header and Box Header assemblies.

### » Built-Up Header Assembly

**Box Header**

**Nested Header**

### » HD Box Header Substitution Table

Typical Boxed Configuration	2-362S125-33 (Boxed)	2-362S162-43 (Boxed)	2-362S162-54 (Boxed)
Priceless Replacement	362HD350-54	362HD350-68	362HD350-97

1. Example: If plans call out for 362S162-43 Boxed Header, then you can substitute 362HD350-68.
2. Substitutions based on meeting or exceeding the vertical and lateral flexural strength and stiffness of the boxed members.
3. Section properties for boxed configurations are based on using track sections of same thicknesses and 1.25" flanges.

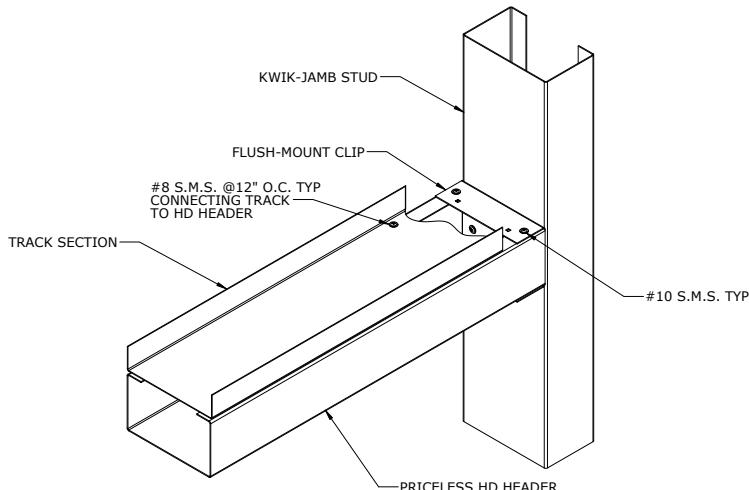

### » HD Nested Header Substitution Table

Typical Nested Configuration	362S125-33 + 362T125-33	362S125-43 + 362T125-43	362S162-54 + 362T125-54	362S162-68 + 362T125-68
Priceless Replacement	362HD300-43EQS	362HD350-54	362HD350-68	362HD350-97
Typical Nested Configuration	600S125-33 + 600T125-33	600S125-43 + 600T125-43	600S162-54 + 600T125-54	600S162-68 + 600T125-68
Priceless Replacement	600HD300-43EQS	600HD350-54	600HD350-68	600HD350-97

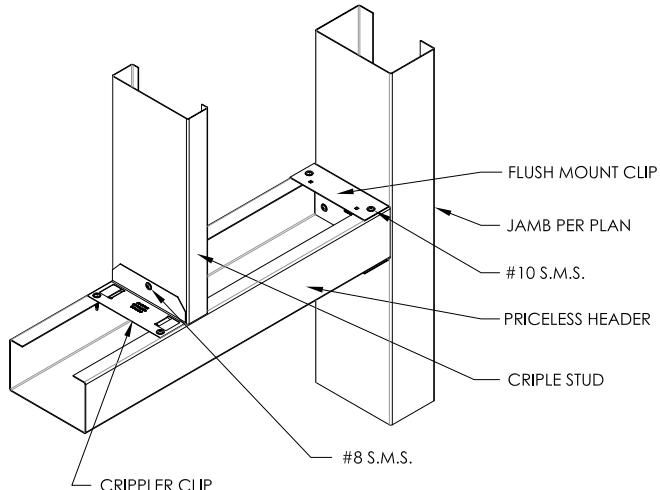

1. Example: If plans call out for 362S125-33 + 362T125-33 Nested Header, you can substitute 362HD300-43EQS.
2. Substitutions based on meeting or exceeding the vertical and lateral flexural strength and stiffness of the nested members.

## Connection Detail / Crippler Clip

**Table Notes**

1. In the case of varying thickness of header and jamb material, use the lowest of the two corresponding allowable loads listed.
2. For web widths not listed, use the next web width smaller in size (Example: For 4" members use 3.625" values).
3. Maximum gap between end of header member and vertical face of clip shall not exceed 3/8 inch.
4. • For the 4 fastener connection to the jamb - screws are to be installed in corner pre-drilled hole locations.
- For the 6 fastener connection to the jamb- screws are to fill all pre-drilled holes.
5. Fasteners are based on minimum #10 sheet metal screws.

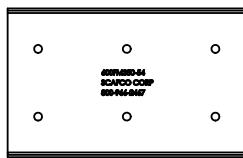

**Flush Mount Clip Allowable Loads**

Header	Jamb	Clip	Number of Fasteners from Clip to Header	Number of Fasteners from Clip to Jamb	Vertical	Allowable Shear Load (lbs)	Horizontal

## HDR Header vs. Traditional Box Header

**HDR Header****Traditional Box Header**

**SCAFCO's HDR Header replaces the traditional Box Header system for conditions with greater vertical and lateral loads.**

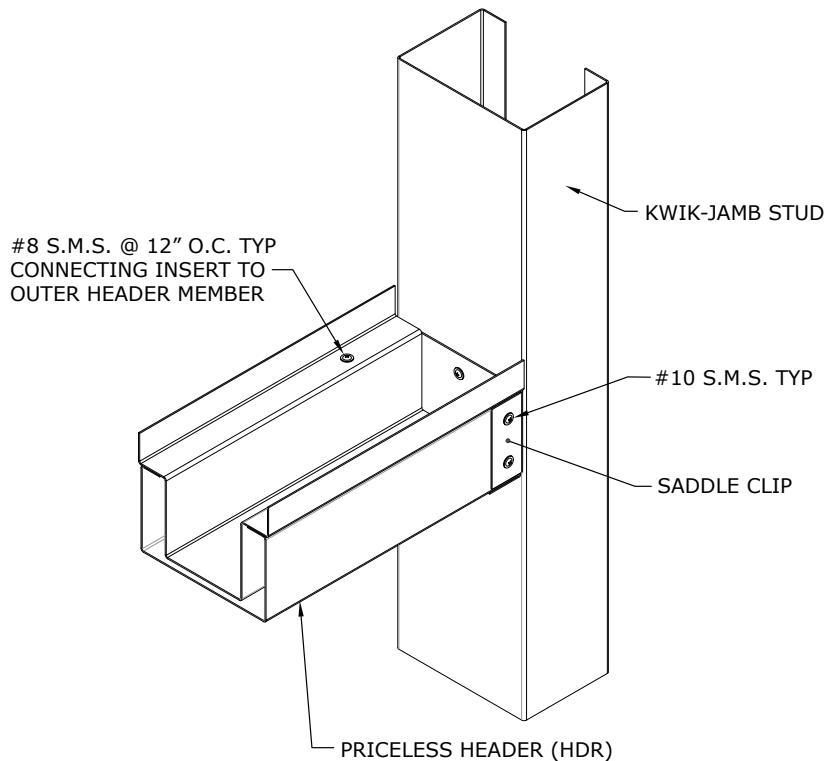

## » HDR Header Substitution Table

Typical Boxed Configuration	2-600S162-33 (Boxed)	2-600S162-43 (Boxed)	2-600S162-54 (Boxed)	2-600S162-68 (Boxed)	2-600S162-97 (Boxed)
Priceless Replacement	600HDR450-68	600HDR450-68	600HDR450-68	600HDR450-97	600HDR450-127

1. Ex. If plans call out for 2-600S162-54 Boxed Header, then you can substitute 600HDR450-68 member.
2. Substitutions based on meeting or exceeding the vertical and lateral flexural strength and stiffness of the boxed members.
3. Section properties for boxed configurations are based on using track sections of same thicknesses and 1.25" flanges.

1. Allowable Moment (Max and May) of combined section are based on a non-composite relative stiffness model.

The offset between the HDR Header lower section and the upper section track leg will be more pronounced for 97mil and 127mil Headers. This material offset may create a slight build up of material along this seam, similar to boxed header construction. 33EQS up to 68mil will have insignificant buildup.

## Table Notes

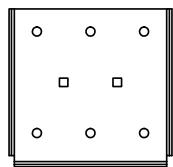

1. In the case of varying thickness of header and jamb material, use the lowest of the two corresponding allowable loads.
2. For web widths not listed, use the next web width smaller in size (Example: For 4" members use 3.625" values)
3. Maximum gap between end of header member and vertical face of clip shall not exceed 3/8 inch
4. • For the 4 fastener connection - screws are to be installed in corner pre-drilled hole locations.  
• For the 6 fastener connection - screws are to be installed in top and bottom rows of pre-drilled holes.  
• For the 8 fastener connection - screws are to fill all pre-drilled holes.
5. Fasteners are based on minimum #10

## Saddle Clip Allowable Loads

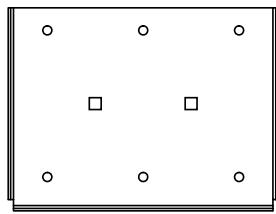

Header	Jamb	Clip	Number of Fasteners from Clip to Header	Number of Fasteners from Clip to Jamb	Allowable Shear Load (lbs)

## General Notes for All Tables

- The span tables are developed in accordance with the 2012 edition of North American Specification for the Design of Cold-Formed Steel Structural Members AISI S100-2012 design provisions.
- Listed lateral loads > 5 psf represent calculated ASD Level designed wind pressure (1.0 W based on 2009 IBC or 0.6 W based on 2012 IBC). For deflection calculations, listed wind pressures > 5 psf have been reduced by 0.70 as allowed by IBC. The 5 psf interior pressure has not been reduced for deflection checks.
- Two-way (header-sill) area distribution method used for span determination.
- Jambs are assumed to be adequately braced at a maximum spacing of Lu, to develop full allowable moment. Wall studs are also assumed to be spaced at maximum 16" o.c. spacing. Heights are based on minimum deflection criteria and flexural strength.
- Calculations are based upon the header being placed at an elevation of 7 ft in the wall system. The configurations are modeled as door openings. For window openings, the header member is adequate but the jamb member should be verified.
- HDR Header span lengths may be limited due to manufacturing capabilities.
- All listed allowable spans are only applicable to non-load-bearing framing applications.
- Subscripts:
  - Indicates Header span limited by clip capacity (Header member can be used for greater span with alternate connection).
  - Indicates web stiffeners must be used to reach the full required height.

## 5 psf Lateral Load 8 psf Gravity Load

**Note:** 8 psf Gravity Load indicates 5/8" Gypsum Wallboard attached to both sides

## Supreme Framing System

Supreme Framing System™ studs and track is a design that uses thinner steel and superior 57 ksi yield strength steel when compared to traditional material. Supreme Framing System™ is available nationally through multiple independent steel stud manufacturers.

- Complies with 2012 IBC
- Multiple UL approved fire-rated assemblies
- Excellent acoustical performance
- 57 ksi steel reduces screw stripping
- Fastens with sharp point screws (D25, D20, 30EQD, and 33EQD )
- Wider flanges for screw placement
- Full line of Supreme Framing accessories
  - Hat Channel and Z-Furring
  - Slotted Leg Track
  - Custom Brake Shapes

## Slotted Leg Track System

SCAFCO Slotted Track is the industry preferred system for achieving head of wall deflection and fire rating for interior and exterior walls. SCAFCO Slotted Track has met the movement and cycling requirements of ANSI/UL 2079, and is UL classified for 1, 2, 3 & 4 hour fire ratings in head of wall fire-rated joint systems.

Details & information of each individual system can be found in the XHBN section of Volume 2 of the UL Fire Resistance Directory, or can be downloaded from [www.SCAFCO.com](http://www.SCAFCO.com).

For more information, contact your local sales representative or visit [www.SCAFCO.com](http://www.SCAFCO.com).
